Product - operational storage ER

Current amendment to ER item 1 - 2026-10-14 - Original ER pages/PDF archives retained

Auction title/categories/cancellation fields live in auction rows, not audit JSON.
Current moderation state remains in products (existing columns are unchanged).
Moderation result receipts retain product IDs after deletion; no cascading FK.
Budget is still derived from campaign attribution facts. Audit history is retained.

auction_rounds

-	title	TEXT NN
-	categories	TEXT[] NN
-	cancellation_reason	TEXT NULL
-	cancelled_at	TIMESTAMP(3) NULL

Relationship keys (physical FK unless marked logical)

R1: auction_items -> auction_rounds [parent:child 1 : 0..N]

round_id -> id

R2: auction_items -> products [parent:child 1 : 0..N]

product_id -> id

R3: product_moderation_commands -> products [parent:child logical / historical]

product_id -> id

PK primary key | FK foreign key | UQ unique | NN not null | IDs to other services are logical references
